

TRAINING & TECHNICAL ASSISTANCE

Section 6.6 of the federal Title X guidelines requires projects to provide for the orientation and in-service training of all project personnel. All project personnel should participate in continuing education related to their activities. Documentation of continuing education should be maintained and used in evaluating the scope and effectiveness of the staff training plan.

Training through HEALTH's Family Planning Program and through the regional training center (JSI) is available to all projects under the Title X Program. In addition to training, project staff may receive technical assistance from HEALTH's Family Planning Program for specific project activities.
